

THE SAGE CREEK TIMES

Braggin' Dragon Student Edition

First Week of October

The Springville Power Plant

by: Cassidy Jones

The Power Plant stinks because there is a little waste pond right next to the buildings. There are 2 to 3 buildings at the Power Plant. The 5th grade had a lot of fun and learned a lot. There was a Ball of Death but all it did was shock you as if you were on a trampoline or rubbing your feet across a carpet and you touch someone else which shocks them and you! This is what the 5th grade did on their field trip.

**BE BIG SAGE CREEK
2015-2016**

Sage Creek Dragons are Fired Up to Learn

**Red Ribbon Week: BIG
Hearts-Strong Bodies-October
5-10th**

PE Classes all week will work on
the Sage Creek Fitness Test
Monday-Class Poster Day
Tuesday-Strong Man Morning
Assembly

NetzSmart Assembly Afternoon
Wednesday-Walk to School Day
Thursday-Classroom visits from a
Springville Red Devil Football
Player

Friday_Wear your favorite sport
shirt to school

Saturday-Sage Creek 5K Family
Red Ribbon Run 9am at SHS

Eating Insects Could End World Hunger

by: Anna Wright

World hunger can be obliterated, just add insects to your diet. An example on why insects should be added on your diet is that they are good for the environment, and that by eating them we would also help the environment. Eating insects could provide jobs for people around the world. Insects are also nutritious and have many vitamins and minerals in them. It's just plain that insects are good to eat, for jobs and the environment (BBC Can Eating Insects Save the World).

Insects are good for the environment in many ways, here are just a few. Insects do not need as much food or water as the average livestock. We throw away one third of our food, insects could use that to grow and thrive (Good Enough to eat). Insects need less space to grow than the larger inhabitants of this world. Creatures like pigs and cows give off more greenhouse gasses than crickets and other insects (BBC: Can Eating Insects Save the World).

The Life of Laura Ingalls Wilder

by: Emily Bell

Can you imagine living in a one roomed house in the hot west without any running water? Well Laura Ingalls Wilder wrote a whole novel about her childhood and where she lived like that. She wrote lots of books and the books were turned into a T.V. show! It is called Little House On The Prairie. So if you want to know more stuff about her, just keep on reading.

Laura Ingalls Wilder grew up with her older sister who was blind. When Laura was little she went to a one roomed school. When she was 15 and still going to school she started teaching. Throughout her childhood she also had to move to 6 different states. Once she lived in a wild prairie. Everyone was scared of the wild grasshoppers that attacked their crops. They were also scared of the bad weather and the indians.

Laura started working for the local newspaper in 1911 and worked for about 20 years. Then when her daughter Rose was old enough they started writing books together. They brought one of the books to lots of publishers who disapproved of it. Other people told her she was wasting her time writing books for children but she never gave up. Eventually her books were published and became very popular.

6th graders LOVE fried crickets!

STUDENT COUNCIL

Student Council

By: Chloe Sleight

This year student council members are:

Ryan Glazer
Caroline Osborn
Berkley Clements
Chloe Sleight
Jack Daybell
Emma Wright
Bentley Reed
Saige Ewing
Taggart Boyce

Eating insects can provide jobs for people around the globe. Eating insects has provided jobs for twenty thousand people in Thailand already (Pass the Bugs Please). Grasshopper hunting gives the opportunity of a job to people in Cambodia where jobs are scarce and hard to find. By selling bugs a woman in Thailand earns twenty times the average daily income, just by selling freshly fried insects (BBC: Can Eating Insects Save the World).

Insects are nutritious and packed with vitamins and minerals. For example, tarantulas have ten times as much zinc as a single hamburger. Zinc is one of the important minerals and helps you grow (BBC Can Eating Insects Save the World). Did you know that by eating fifty large grasshoppers, you can get the same amount of protein as eating a hamburger? Well now you do (pass the Bugs Please). The eggs of an insect are also healthy. most people say they are delicious (BBC: Can Eating Insects Save the World). To wrap it all up I would have to say in all insects are highly nutritious.

In closing insects are a good thing to add to your diet in many ways. First insects are good for the environment. Second eating insects can (and is) provide jobs for people around the world. My third and last reason is insects are full of nutritious vitamins and minerals. If we add insects to our

Laura's husband Almonzo built a house for her. She lived there for the rest of her life. At the end of Laura's life she read to kids and was like a grandma to all the kids around, until she died around her birthday at the age of 90.

Now can you imagine living in a one roomed house when you are little and having a fun, yet hard life like Laura Ingalls Wilder?

Little House on the Prairie
TV series 1973-1983

These 9 kids are going to be great leaders this year. They will do all that they can to make you feel happy this year at Sage Creek Elementary. They will be doing really fun assemblies, & things during the year to make this year BIG!!!

5th grade News

by Kimberly Santoyo

5th grade field trip

This is what some fifth graders said " I loved the field trip because i liked when some people showed us all around the power plant. The thing i didn't like about it was when we got there it smelled really bad, but i liked it when they gave us cookies and lemonade."

5th's grade first day of school

" In the first day of 5th grade everyone was really nervous and scared that they were not going to have any friends. Later some people make friends with everyone and then your best friends forever. Everyone has to remember if your different from each other you're still friends."

Everyone loves 5th grade. This is what they said; "I love fifth grade because you get to learn millions and millions of things. Science is also fun because when it gets more challenging it way funner." We also say this about 5th grade;

5TH GRADE ROCKS! ;)

diet then the whole world would be a better place (BBC: Can Eating Insects Save the World).

Yum!!! I love fried crickets flavored with lime!

Lair Of Leaders

by Amanda Critchfield

You can be nominated to be in Lair of Leaders. Snacks include Pizza, Root Beer, Oreos, Fruit and others. You can also tell Mrs. Burr your concerns. You can be nominated by being kind, helpful and Being Big! I think Lair of Leaders is a good way to teach kids to be leaders. Teaching kids to be leaders might involve standing up to bullying. Lair of Leaders involves being a good friend.
